

# Effective Health Care

## Reduced Video Exposure to Improve Memory Problems Nomination Summary Document

### Results of Topic Selection Process & Next Steps

- The topic, *Reduced Video Exposure to Improve Memory Problems*, did not include enough information for further assessment by the Effective Health Care Program. No further activity will be undertaken on this topic.

### Topic Description

**Nominator(s):** *Individual*  
**Nomination Summary:** The nominator asserts that reduced video exposure by people with memory problems will improve their memory. The nominator also seems to imply that reduced video exposure may also help in diagnosing people with memory problems.

### Considerations

- The Agency for Healthcare Research and Quality (AHRQ), through its Evidence-based Practice Centers (EPCs), sponsors the development of systematic reviews to assist public- and private-sector organizations in their efforts to improve the quality of health care in the United States. These reviews provide comprehensive, science-based information on common, costly medical conditions, and new health care technologies and strategies. Systematic reviews are the building blocks underlying evidence-based practice; they focus attention on the strength and limits of evidence from research studies about the effectiveness and safety of a clinical intervention.
- This topic could not be further evaluated because it did not include enough information in the original nomination to define the relevant populations, interventions, comparators, and/or outcomes of interest. No further program activity will be undertaken on this nomination.
